

DATASHEET

# Digital Risk Protection Service

## Hunt Threats Before They Strike

Binary Defense's Digital Risk Protection service combines the expertise of former FBI, military, government, and private sector analysts with advanced tools. Using external and in-house scrapers, sock puppet accounts, and access to over 1,500 sources, we provide monitoring of a unified threat landscape to identify and respond to threat actors protecting you, your brand, and reputation.

Our analysts deliver rapid risk notification of threat indicators found on the surface web, deep web, dark web, and social media. Through actionable reporting, you'll gain clear context and valuable insights, ensuring you stay informed and prepared to address threat actors impersonating or targeting you.

We don't wait for threats to strike; we anticipate and hunt them down. With customized risk profiling across your digital footprint, you will stay one step ahead.

Executive Monitoring Package		
	What We Do	How We Do It
Reputation	Monitor for negative social chatter, threatening commentary and smear campaigns	Our teams identify the bad actors, provide context on the chatter, and work with you to get it shut down.
Data Breach	Monitor for leaked database information, data for sale on criminal forums and targeted personal information theft campaigns.	If your personal information is found our teams notify you with steps to prevent that stolen dWta from being used against you.
Travel Advisories	Build travel threat assessments based on each Executives risk profile for that destination.	Before travel, our team will provide a report with known areas to avoid that could potentially make you a target for threats.
Personal Consultation	Advise Executives on potential cyber threats through an on-demand via phone or email.	Through advice and guidance our team helps Executives eliminate uncertainty and take decisive action to mitigate cyber threats.
Domain Takedown	Work with the client to identify and request takedown of identified malicious domains	If domains are actively involved in phishing campaigns, mirroring a legitimate Client domain, or infringing upon the Client's valid copyrights or trademarks, the Binary Defense counterintelligence team will request the takedown of those domains.

Binary Defense is a trusted leader in Managed Detection and Response (MDR), helping organizations across industries stay ahead of modern cyber threats. Our team of SOC analysts, threat hunters, detection engineers, and researchers works around the clock to deliver outcomes that matter: earlier threat detection, faster response, and stronger long-term security.

We take an attacker's mindset to defense, combining deep expertise with proactive tradecraft to protect what matters most.
